

```
/* Manipulating the DOM with JavaScript */
```

```
// Creating, adding and removing:
```

```
document.createElement('HTMLtag'); // Create an element  
document.body.append(myElement); // Insert first  
document.body.prepend(myElement); // Insert last  
parentElement.insertBefore(newElement, existingElement); // Insert before  
element.remove(); // Remove element
```

```
// Content setting:
```

```
element.innerHTML = "HTML content"; // Set HTML content inside element  
element.innerText = "text content"; // Set text (preserves formatting)  
element.textContent = "text content"; // Set text (ignores formatting)
```

```
// Working with attributes:
```

```
element.getAttribute('attribute'); // Returns attribute value  
element.removeAttribute('attribute'); // Removes attribute  
element.setAttribute('attribute', 'value'); // Sets attribute with value  
element.id; // Returns element id  
element.id = 'value'; // Sets element id  
element.classList.add('classItem'); // Add item to class list  
element.classList.remove('classItem'); // Remove item from class list  
element.classList.toggle('classItem'); // Toggle item in class list
```

```
// Editing styles:
```

```
getComputedStyle(myElement); // Returns all styling of element  
element.style = "CSS"; // Sets element style  
element.style.styleAttribute = "CSSvalue"; // Sets style attribute value
```
